AIM: Methods of Java URL class.

Input:

```java
import java.net.*;

public class URLSample {

    public static void main(String args[])

    {

        try {

        URL a = new URL("https://www.google.co.in:443/search/yatrik.html");

        System.out.println("Protocol is:"+a.getProtocol());

        System.out.println("Host is:"+a.getHost());

        System.out.println("Port Number is:"+a.getPort());

        System.out.println("Path is:"+a.getPath());

        }

        catch(Exception e)

        {

            System.out.println(e);

        }

    }
}
```
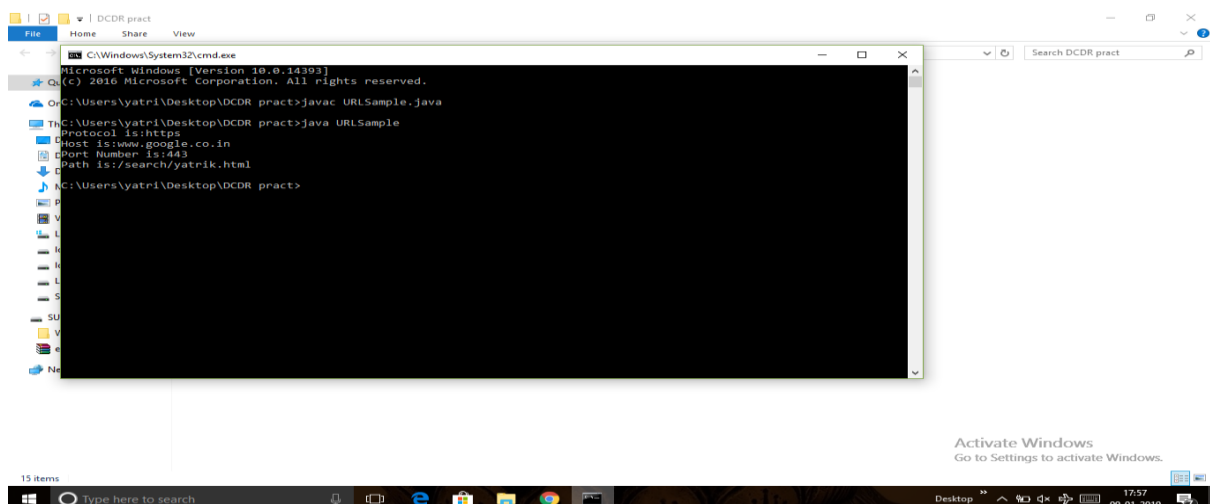

Output:
